VERITAS™

The truth in information.
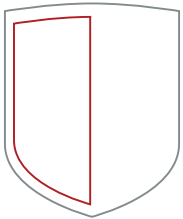

Veritas NetBackup 8.1.2
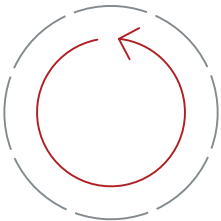

Top reasons to upgrade.

SIMPLER TO MANAGE.

With NetBackup™ 8.1.2, the most common activities can now be accomplished within a few clicks or touches, thanks to the new intuitive, web-based UI. Authorize secure, self-serve access for a variety of other users with different roles from your desktop or mobile device.

Not ready to switch to the new UI just yet? The classic NetBackup UI is still there for you.
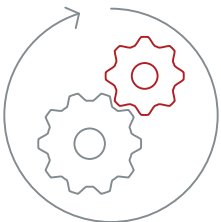

SIMPLER TO PROTECT.

NetBackup is known for having the broadest workload coverage in the industry and this tradition has continued uninterrupted since the last release. You can now protect more workloads than ever, including MySQL, PostgreSQL, MariaDB, SQLite, HBase, and MongoDB. This release also introduces simple orchestration of snapshots for cloud workloads on Amazon Web Services (AWS), Microsoft Azure, and Google Cloud.
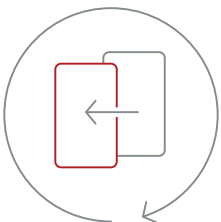

SIMPLER TO RECOVER.

Need to quickly restore a file from a virtual machine? With NetBackup 8.1.2 Instant Access, you can quickly boot up a VMware vSphere® virtual machine on the NetBackup Appliance, browse for what you need, and get your data back.

Want someone else to do it for you? No problem—the new NetBackup web UI allows secure access only to those you have authorized. Any file system is supported, and best of all you can finally remove all NetBackup agents from your VMware environment.

SIMPLER TO AUTOMATE.

With increasing labor and budget pressures, it can be a challenge to get all the work done within the limited hours of a day. NetBackup 8.1.2 allows you to automate most activities and customize your user experience through API-level integration. The NetBackup RESTful API library now includes a broad range of calls that can be used to integrate with ticketing and provisioning systems such as ServiceNow®, BMC®, Remedy, or Ansible.
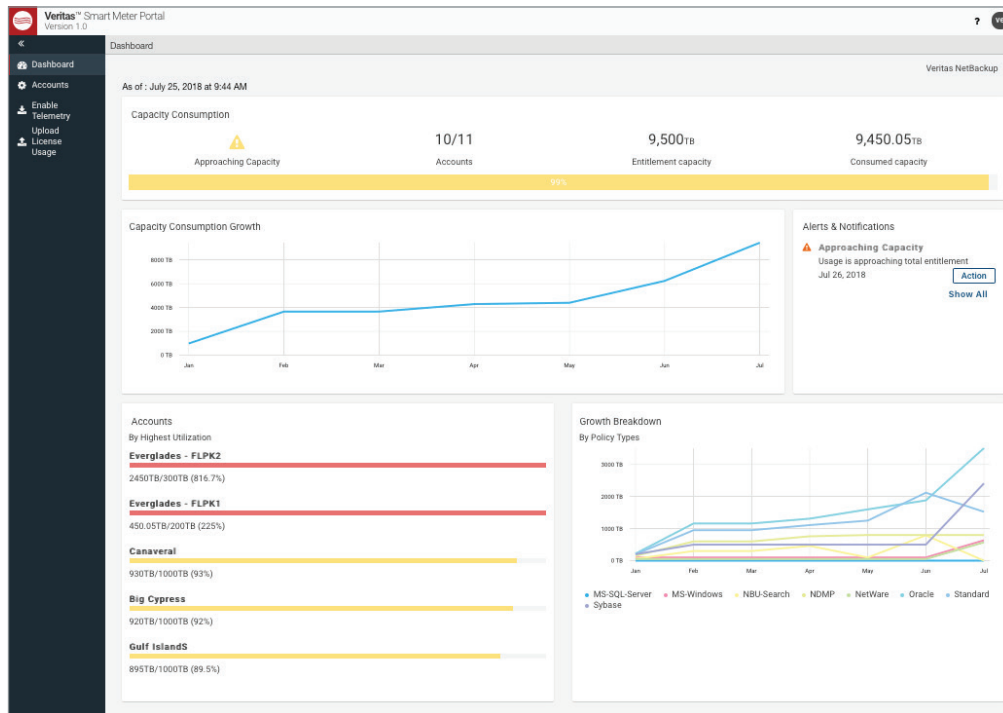

SIMPLER TO UPGRADE.

Upgrades can be a challenge, but with NetBackup 8.1.2 they are easier than ever. With automatic client updates you can maintain agent software with significantly less hassle, and better yet, NetBackup Appliance users can go completely agentless in their VMware environment without sacrificing granular restores, thereby simplifying upgrades tremendously. Reduce your time-to-value with NetBackup Flex Appliance which will allow you to deploy a new NetBackup environment in under five minutes.

SIMPLER TO PLAN.

Do you know how much data you are protecting, how fast it is growing, and when you will need to increase your capacity? With Veritas Smart Meter these questions can be answered with the click of a mouse.

Smart Meter is a web-based portal that combines NetBackup 8.1.2 usage data with license information to give you the clearest picture yet of your consumption—all without scripts, command line operations or spreadsheets.

ABOUT VERITAS TECHNOLOGIES LLC

Veritas Technologies empowers businesses of all sizes to discover the truth in information—their most important digital asset. Using the Veritas platform, customers can accelerate their digital transformation and solve pressing IT and business challenges including multi-cloud data management, data protection, storage optimization, compliance readiness and workload portability—with no cloud vendor lock-in. Eighty-six percent of Fortune 500 companies rely on Veritas today to reveal data insights that drive competitive advantage. Learn more at www.veritas.com or follow us on Twitter at @veritastechllc.
